

Automated Contact Tracing

- Smartphone based apps for quick and efficient contact tracing is a part of the effort to contain the pandemic
- Most such apps employ GPS and Bluetooth

Blockchain Powered Contact Tracing

- We propose to manage the exposure database using blockchain where user-shared data is managed securely and in a privacy-preserving manner by the government that ensures transparency
- Full decentralisation using blockchain will encourage quick and broad voluntary adoption as citizens would prefer to use systems that are transparent and resilient to attacks, in addition to being privacy preserving
